EDITORIAL

When I was twenty and freshly trained in electronics, and I engineered my first time relay, I had no idea that today I would be controlling it from a smartphone apps. The dynamic development of IT technologies as well as Internet of Things also permeated a bit later in controlling electrical installations, creating a whole new field called the "Smart Home". What separates us from the competition is not only our flexibility and ready approach to custom modifications, but also the desire to "Always something more!" We invest a substantial part from this into developing systems of intelligent electrical installations. Our iNELS, which either wirelessly or via bus covers now controls several thousand buildings throughout the world. In a few years of hard work of the entire development department we have elevated iNELS to a complex system involving not only the switching of appliances, dimming of lights or control of blinds, but also control of security, HVAC, the camera surveillance system, audio and video distribution - the list goes on...

So right from your smart phone, you can control the washing or coffee machine, the A/C or home theater system. We are a traditional and at the same time innovative purely Czech manufacturer of electronic

devices and we have been your partner in the field of electrical installations for 30 years. Thanks to many years of experience and operation on the electrical market, we have become specialists in electronic modular devices - relays, of which we already produce more than 300 types. Our own production, modern devices, development and research center - all these allows us to direct the development towards the most popular technologies of today, the smart wiring system iNELS. Thanks to the fact that everything is developed and manufactured so-called „in-house“, you can be sure that everything works as it should.

Our technicians, who carry out regular training of

partners, are also helpful to you - whether you are starting out or you have advanced successfully in the field. To be always close to our customers - whether with technical support or a well-stocked warehouse, you will find our branches in 11 branches around the World. In addition, we have steadfast customers in more than 70 countries around the world, and more are constantly being added as the demand for our products grows.

We are honoured that you can be with us.

Jiří Konečný

SMART HOME & BUILDING

The new industrial branch Smart electro-installation has been developing by quantum leaps in recent years. ELKO EP has kept a careful eye on these trends, and with them in mind, it has introduced the iNELS system to the market. Through its wide-ranging versatility, it covers contemporary requirements for intelligent electrical installations for various sized buildings: from apartments to family homes, villas and hotels to factories.

In this brochure, you will find a selection of over 10,000 installations that iNELS has performed in its existence. References are thematically grouped based on type of building. It is not a complete listing, but offers inspiration. It includes apartments, homes, villas and hotels, but also commercial and historical buildings.

Relays

All under one roof

APARTMENT & HOUSE

Owners of existing apartments and houses in which electrical installations already exist need not worry. We have prepared for them an iNELS wireless version – RF Control. As the name implies, it functions wirelessly, so there is no need to install or rearrange cabling. The wireless iNELS includes functions for controlling appliances, dimming lights, timing for shutters and blinds and heat regulation.

For larger houses and villas, we recommend the sys-

tem iNELS BUS. The basis of the structure is a communications data cable, a so-called bus, by which all sensors, controllers and performance elements in the home are connected. The advantage is not only in the amount of functions that the bus brings, but also the option of integrating third-party devices: video cameras, kitchen appliances, devices for heating, air-conditioning, heat pumps, solar systems, photo voltaic systems, energy management and much more.

Benefits

Security

The built-in alarm not only watches for burglars, but also for gas leaks or fires.

Savings

By proper regulation of the temperature and linkage of home technologies, you can achieve substantial savings.

Automation

All functions take place in the background without bothering you. The system monitors, regulates,...

Design

Glass touch controllers in white or black stand out in any interior.

Remote monitoring

Whether you are at home or away, your home remains under the constant control of your smartphone.

HOTEL

In recent years, iNELS has been developed for horizontal control of technologies not only for hotels, but also for apartment houses, office buildings and everywhere it is necessary to resolve separate access of current residents, as well as their comfort.

iNELS in the form of GRMS (Guest Room Hotel Management System) enables not only control of lighting, air-conditioning or room access, but

also control of music or television. All of this occurs from the central touch panel in designs of clear plastic, wood, metal, stone or luxurious glass touch panels. A standard service we offer is customization – a description of symbols applied by laser onto plastic or glass controllers based on specification.

www.inels.com/hotel

Benefits

Adjust to guest

Thanks to integration into a hotel system, it is possible to create a room scene when a guest registers.

GRMS

Guest Room Hotel Management System.

Comfort

The combination of automatic illumination based on motion and central control of the room.

Do Not Disturb

Guests can very easily signal if they want the room cleaned, or do not want to be disturbed.

Master off/ Energy saver

When the guest leaves, the system automatically disconnects all electrical appliances

COMMERCIAL

iNELS finds more and more application in the wide sphere of commercial buildings – stores, offices, restaurants, hospitals, but also in historical buildings or manufacturing halls.

Though it is most frequently used to control lighting and HVAC, you will find iNELS projects using an access system, shading control, a video camera security system or distribution of audio/video.

The main emphasis is placed on problem-free operation of the building, efficient energy use and operations security. iNELS meets these needs to the fullest.

www.inels.com/commercial

Benefits

Connection to BMS

iNELS can easily be connected to a Building Management System.

Energy saving

Appropriate regulation saves costs in building operation in terms of heating, cooling, water heating, etc.

Automation

Guests can very easily signal if they want the room cleaned, or do not want to be disturbed.

Access system

Based on access rights, the system controls employee and visitor access to various parts of a building.

Versatility

The system is suitable for installing in large and small commercial buildings alike.

SHOWROOM

iNELS was developed not only for technology management in prefabricated and family houses, but also in large buildings.

However, the questions still remains: which technology is suitable for you. How to find out best what will fit your apartment or office the most? Visit one of our showrooms, where our trained staff will advise you on which solution is the most suitable for you.

You can see and try all our products in three Prague showrooms, one in Holešov and also one in sunny Ibiza. Learn about technologies that can make life more pleasant wherever you are.

Benefits

Interactivity

You can try all the solutions offered by us yourself.

All together

In our showrooms you will find the solutions and products offered as a whole.

Professional staff

Anything you don't understand or need to know, you just have to ask.

Easy accessibility

Showrooms are located in larger cities in the Czech Republic and their numbers will continue to increase.

iNELS Café Prague, Czech Republic
